

VENTRA -

We let windows breathe

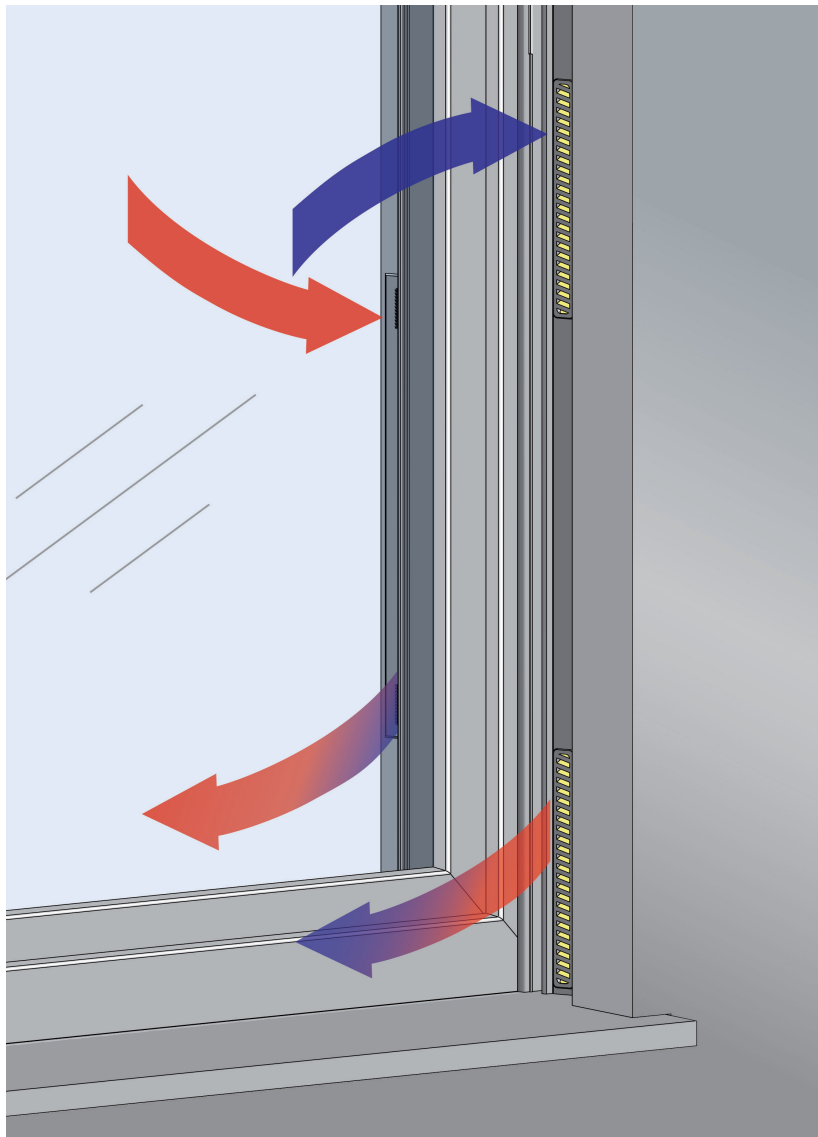

Installed at the window, our VENTRA fan provides a constant stream of fresh air that permeates the entire room

Well-being

- Fresh air provides a feeling of comfort
- Ventilation as needed prevents the growth of mould
- A pollen filter protects persons suffering from allergies
- A heat exchanger keeps the supplied air at a comfortable temperature
- Ventilation at any time without any bothersome noise

Security

- Exchange of air with the window closed
- The window's burglar protection and density against driving rain are retained
- When leaving the house, you will no longer have to worry whether you left the window open after ventilating the room

Ventilation by fan

created by

You know when it's HAUTAU.

VENTRA -

Ventilate and feel comfortable

Comfort

- Constant and automatic exchange of moist air and unpleasant odours for fresh air
- Operation directly at the window

Energy savings

- Negligible energy losses thanks to heat exchanger
- User-independent and demand-dependent ventilation in accordance with DIN 1946-6
- Energy-efficient ventilation thanks to low energy consumption

Design

- Integrated completely into the window reveal
- No adverse effect on the architecture

Installation

- Can be fitted in a single work step during window installation
- Quick and easy assembly and installation by the window manufacturer
